

NU Student Profile

This website allows students to showcase their dedicated works, assignment, achievement and fruit of labors during their journey in the built-in CV feature. In addition, Norton University could post relatively new jobs and opportunities to ensure their students are up-to-date with the company that is interested in hiring our students. Moreover, offering students to become a “service provider” allows them to increase their chance of exposing their skills and service to employers.

Prototype System:

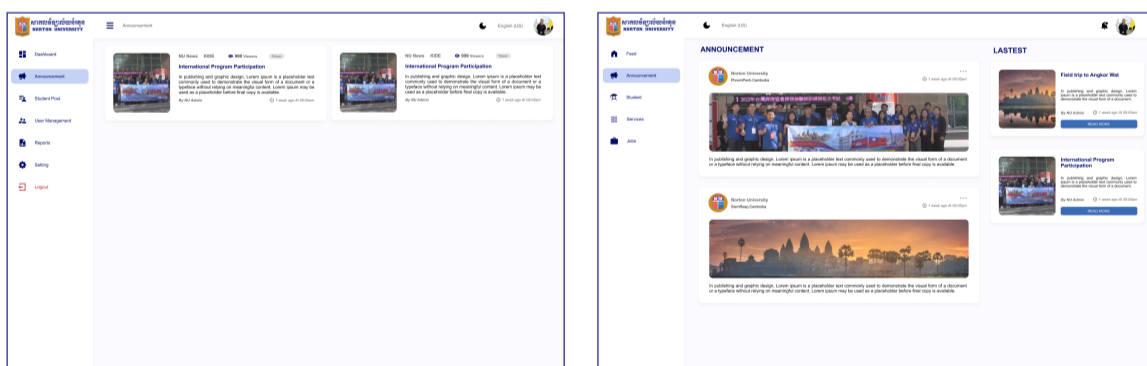

1. Student Profile

Students can set up personal information, experiences, education, assignments, and any achievements on their profile. They don't need to use another platform to build a resume; we will transform the data into a resume using the template that they select. In addition, teachers or seniors can also rate the student's profile and give recommendations to make it more useful and trustworthy.

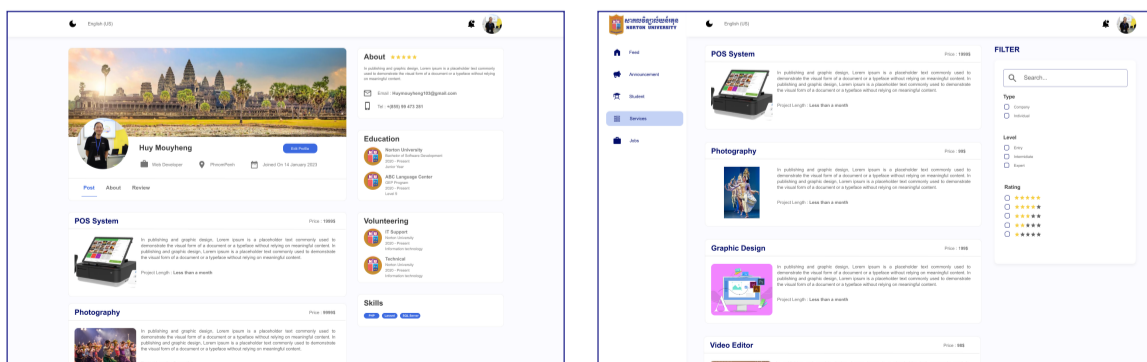

2. Post Announcement

The university can publish a variety of opportunities on the website, including relatively recent jobs, school announcements, activities, and more. Students will receive notifications for each announcement from the school to make sure they are informed. Additionally, When the school posts new jobs related to their major, we will notify a specific group of students.

3. Service Provider

Our website allows outsiders to visit student profiles and any posts without registration. Students can use the platform to advertise their services or jobs that they can do in order to earn extra money and gain more experience.

Goal of Project :

- To help student show their potential and achievement.
- Provide many opportunity to students to get job from other companies.
- Norton Alumni can sharing their document and experience to junior and build connection with each other.
- Help students find an internship or job easily.
- Build resume using existing data.

Developer :

1. Mr.Mithona Luy (Advisor)
2. Mrs.Lakhena Keo (Advisor)
3. Ms.Mouyheng Huy
4. Ms.Leangheng Map

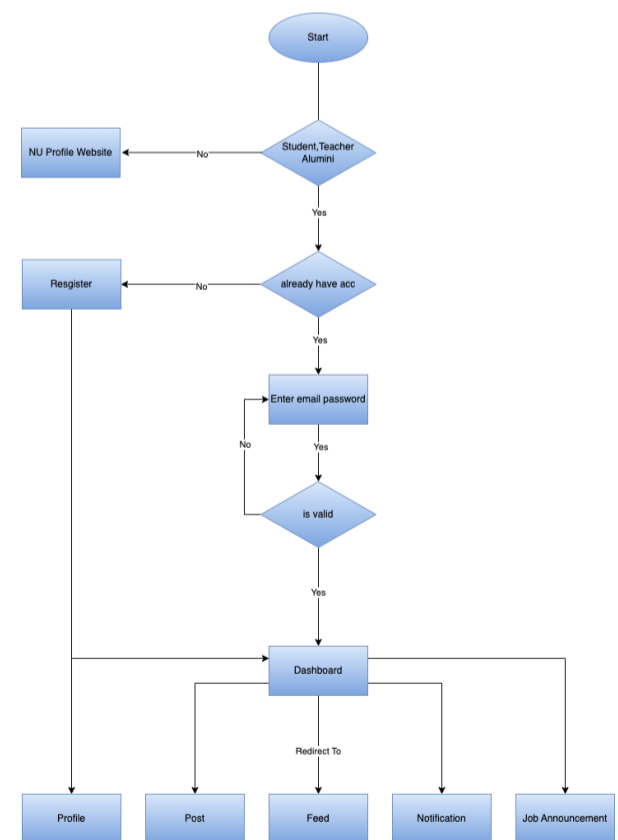

Technology :

1. Vue JS
2. Laravel Framework
3. MySQL
