

AUTIZMO

DR. CATHERINE DEMETRIADES

Facebook: **Catatrix in the Matrix**

PRODUCT SUMMARY

A robot prototype that is able to dissect and understand conglomerations of masses in biophysical computational thought processes that build up and are unreadable by humans. It can dissect straight forward behaviors as well as confusing complex ones. The subatomic particles which carry out genetic commands used to be undetectable with microscopic technology and hadn't reached the stage where it can find, much less decipher, the automatic emotional blueprints programmed into the DNA-RNA. Autizmo is the breakthrough in Quantum Robotics and solves problems consistently and will do as much as it's master commands.

Autizmo is a quantum robot that translates how a mammal thinks and feels within their emotional matrix. Unlike machine learning and facial expression recognition, Autizmo scans Quanta and dissects the influence matrix of the psyche by effectively changing the non-verbal world of both humans and animals with profound understanding. The invention has a great potential for commercialization for home unit robots of all types with non-verbal translations. This is the base for a vast number of applications in the robotics, nano-technology engineering, mechanics and mechatronics market.

PRODUCT VISUALS

AUTIZMO

Using a non-invasive infrared sensor, Autizmo Technology is able to extract the necessary information for a deep and accurate analysis of behavior.

Profound understanding in non-verbal humans and animals.

Much like photography: Photon and Graphy meaning to write... we can translate it as being: a photo is an image written in the light.

Thus as an image is written in the light in a photo to be forever recorded, so are the images, emotions, and stories of our lives within bundles of light....our Quanta.

Technology

The First Quantum Artificial Intelligence of the Influence Matrix

Quanta is the key to looking at behavior in another light.

ACHIEVEMENTS

- ❖ iCAN 2019 Gold Medal
- ❖ iCAN 2019 Special Inventor Award
- ❖ iCAN 2019 Genius Award
- ❖ iCAN 2020 Gold Medal
- ❖ iCAN 2020 TISIAs Special Award

INVENTION PRESENTED BY
TISIAs - CANADA
